AMENDMENTS TO THE SPECIFICATION

Please amend paragraph [0001] on page 1 of the specification as follows:

[0001] This application relates to ~~Attorney Docket No. GP-175-31-US~~ <u>U.S. Patent Application No. 10/749,439</u>, filed herewith and entitled[[,]] "Systems and Methods for Providing and Installing Software," the entirety of which is incorporated herein by reference. This application also relates to ~~Attorney Docket No. GP-175-32-US~~ <u>U.S. Patent Application No. 10/749,441</u>, filed herewith and entitled[[,]] "Systems and Methods for Providing Software Updates," the entirety of which is incorporated herein by reference.

Please amend paragraph [0025] on page 7 of the specification as follows:

[0025] Throttling-back processor 110 requirements can be accomplished by pausing between execution [[or]] <u>of</u> processor-intensive calculations, such as might be performed for some indexing steps. A similar process may occur for other resources, such as for example, memory 108 resources and communication resources (not shown). Throttling-back memory 108 can be accomplished by loading fewer components at one time or by having each component dynamically scale back on its memory usage. Communication (or bandwidth) requirements can be throttled-back by slowing download from the server 104, e.g., setting a lower priority or requesting less data at any one time. Of course, the reverse can be performed, i.e., throttling-up when resources become available.
